Mixed Facts Review
Answer Key

Grade 1

Quick Answers

1. 13
2. 12
3. 15
4. 8
5. 7
6. 15
7. 8
8. 13
9. 9
10. the missing number = 7, —

What is verified

9 of 10 problems fully machine-checked against SymPy.
— marks an answer only you can judge — problem 10. The worked solution states what a correct response must contain.

Curriculum

Level: Grade 1
1.OA.A.1 – *problems 6, 9*
1.OA.C.6 – *problems 1, 2, 3, 4, 5, 7, 8, 10*
Difficulty 1–4 of 5 across 11 tagged checks.

1. $9 + 4 = \_\_$
Solution: Make ten: 9 and 1 is 10, and 3 more is 13. $\boxed{13}$

2. $6 + 6 = \_\_$
Solution: A double: 6 and 6 is 12. $\boxed{12}$

3. $7 + 8 = \_\_$
Solution: Near double: 7 and 7 is 14, one more is 15. $\boxed{15}$

4. $14 - 6 = \_\_$
Solution: Take away through ten: $14 - 4 = 10$, then two more, $10 - 2 = 8$. $\boxed{8}$

5. $5 + \_\_ = 12$

Solution: A missing part — count on from 5 to 12: 6, 7, 8, 9, 10, 11, 12 is seven jumps. $\boxed{7}$

---

6. Ken's tower: 8 red blocks and 7 blue blocks. How many blocks?

Solution: Both parts are known, so add: 8 and 2 make 10, and the leftover 5 makes 15 blocks. $\boxed{15}$

---

7. $17 - 9 = \_\_$

Solution: Count up from 9: 9 to 10 is 1, 10 to 17 is 7, so 8 in all. $\boxed{8}$

---

8. $\_\_ - 4 = 9$

Solution: The whole is missing, not a part! Put the parts back together: $9 + 4 = 13$. Check: $13 - 4 = 9$. $\boxed{13}$

---

9. 16 apples, the kids ate 7. How many left?

Solution: Taking away, so subtract: $16 - 7$. Count up from 7 to 16: that is 9 apples left. $\boxed{9}$

---

10. Challenge: $8 + \_\_ = 15$ and $15 - \_\_ = 8$. Tell how you know.

Solution: Find the missing part first: count on from 8 to 15, which is 7 jumps. The same 7 fits the subtraction, because both equations use the same fact family. $\boxed{7}$

Tell how you know (instructor judges): accept any wording that connects the two facts — for example, "8 and 7 make 15, so taking the 7 back out of 15 leaves 8. It is the same three numbers both times."
