How Many? Counting Practice

Answer Key

Kindergarten–Grade 1

Quick Answers

1. 3
2. 5
3. 7
4. 6
5. 6
6. 8
7. 12
8. 9
9. 10
10. how many dots = 20, —

What is verified

9 of 10 problems fully machine-checked against SymPy.
— marks an answer only you can judge — problem 10. The worked solution states what a correct response must contain.

Curriculum

Level: Kindergarten–Grade 1
K.CC.B.5 – *problems 1, 2, 3, 4, 5, 6, 7, 8, 9, 10*
Difficulty 1–4 of 5 across 11 tagged checks.

---

1. A row of dots — count and write how many.
Solution: Touch each dot once: "one, two, three." The last number said tells how many, so there are $\boxed{3}$

2. A row of dots — count and write how many.
Solution: One number per dot: "one, two, three, four, five." The count ends at $\boxed{5}$

3. A row of dots — count and write how many.
Solution: Count steadily, one touch per dot: the count runs from one up to seven, so there are $\boxed{7}$

4. Ten-frame with a full top row and one dot in the bottom row.
Solution: The full top row is 5 without recounting. Count on for the bottom row: "six." $5 + 1 = 6$, so there are $\boxed{6}$

5. Array with 2 rows of 3 dots.
Solution: Count the first row: 3. Count on through the second row: "four, five, six." $3 + 3 = 6$, so there are $\boxed{6}$

6. Ten-frame with a full top row and 3 dots in the bottom row.
Solution: Top row is 5. Count on: "six, seven, eight." $5 + 3 = 8$, so there are $\boxed{8}$

7. Array with 3 rows of 4 dots.
Solution: Each row has 4. Count row by row: $4 + 4 + 4 = 12$. The count ends at $\boxed{12}$

8. A long row of dots.
Solution: A long row is where skipped or double-counted dots happen — touch each dot exactly once. The count ends at $\boxed{9}$

9. A completely full ten-frame.
Solution: A full row is 5, and there are two full rows: $5 + 5 = 10$. A full ten-frame always shows $\boxed{10}$

10. Challenge: big array (4 rows of 5 dots), then tell how you counted.
Solution: Each row has 5 dots and there are four rows: $5 + 5 + 5 + 5 = 20$. The total is $\boxed{20}$

Telling how (instructor-judged): accept any real one-to-one strategy — "I touched every dot once," "I counted one row and added the rows," or "I counted by fives." The strategy must explain the count; a bare guess with no method does not earn credit.
