What is verified

9 of 10 problems fully machine-checked against SymPy.

— marks an answer only you can judge — problem 10. The worked solution states what a correct response must contain.

Curriculum

Level: Kindergarten–Grade 1

1.OA.C.6 – *problems 4, 7, 9, 10*

K.OA.A – *problems 1, 2, 3, 5, 6, 8*

Difficulty 1–4 of 5 across 12 tagged checks.

- 1.** Warm-up. The ten-frame shows 7 dots. How many empty boxes are left to make 10?
 $7 + \underline{\quad} = 10$

Solution: The frame holds 10 boxes. 7 are filled, so count the empty boxes: 8, 9, 10 — that is 3 boxes. Check: $7 + 3 = 10$. 3

- 2.** Warm-up. The ten-frame shows 4 dots. How many more dots would fill it? $4 + \underline{\quad} = 10$

Solution: 4 dots fill most of the top row. Count up from 4 to 10: 5, 6, 7, 8, 9, 10 — that is 6 dots. Check: $4 + 6 = 10$. 6

- 3.** Warm-up. Take 6 out of 10. How many are left? $10 - 6$

Solution: 6 and its partner make 10. Think of the partner pair $6 + 4 = 10$: taking 6 away leaves the partner. $10 - 6 =$ 4

- 4.** Make ten first: $9 + 4$ is the same as $9 + 1 + 3$. Find $9 + 4$.

Solution: Move 1 from the 4 over to the 9: now $9 + 1 = 10$, and 3 is left over. $10 + 3 = 13$, so $9 + 4 =$ 13

5. Think of a ten-frame with 2 dots in it. How many boxes are empty? $2 + \underline{\quad} = 10$

Solution: 2 dots leave the rest of the frame empty: 3 empty in the top row and all 5 in the bottom row, $3 + 5 = 8$ empty boxes. Check: $2 + 8 = 10$. 8

6. Think: 7 and how many more make 10? Find $10 - 7$.

Solution: 7 needs 3 more to make 10 ($7 + 3 = 10$), so taking 7 from 10 leaves 3. $10 - 7 =$ 3

7. Make ten: fill 8 up to 10, then add what is left over. Find $8 + 6$.

Solution: 8 needs 2 to make 10, so split the 6 into $2 + 4$. Then $8 + 2 = 10$ and $10 + 4 = 14$, so $8 + 6 =$ 14

8. Zoe has 10 berries. She puts 5 of them on her plate. The rest stay in the bowl. How many berries are in the bowl?

Solution: Ten decomposes into 5 and its partner: $5 + 5 = 10$. So after 5 go on the plate, $10 - 5 = 5$ berries stay in the bowl. 5

9. Pick your plan, then add: $7 + 5$.

Solution: Make ten: 7 needs 3 to fill up, so split the 5 into $3 + 2$. Then $7 + 3 = 10$ and $10 + 2 = 12$, so $7 + 5 =$ 12

10. Challenge! Mo adds three numbers: $6 + 4 + 2$. First find the partner of 6, then add all three, and tell how making ten helped.

Solution: The partner of 6 is the number that fills it to ten: $6 + 4 = 10$, so the partner is 4

Now use it: group $6 + 4$ first to make 10, then $10 + 2 = 12$. So $6 + 4 + 2 =$ 12

Tell how making ten helped (instructor judges): a good answer says that 6 and 4 make a ten, and adding the last 2 onto 10 is easy, so grouping the partners first makes the whole sum quick.
