

Skills Summary

Lengths and Picture Graphs

Use this reference while completing your worksheet or when studying.

Compare two lengths

Rule: Measure both things with the SAME unit. More units means longer, and subtracting the counts tells you by how much.

Example: The rope is 10 cubes long and the stick is 6 cubes long. How many cubes longer is the rope?

Step 1. Both lengths use the same unit, so the difference of the two counts is the difference in length.

Step 2. $10 - 6 = 4$.

$\Rightarrow$ the rope is **4** cubes longer

Try it: A scarf is 11 clips long and a sock is 5 clips long. How many clips longer is the scarf?

check: 9 clips

Read a picture graph

Rule: First read the key: each picture stands for one thing. Then count the pictures in the row you need.

Example: Pets chart (each $\bullet$ = one pet): cats: $\bullet \bullet \bullet$ dogs: $\bullet \bullet \bullet \bullet \bullet$. How many dogs?

Step 1. Find the dogs row, then count its pictures one by one.

Step 2. The dogs row has five dots.

$\Rightarrow$ there are **5** dogs

Try it: Using the same pets chart: how many cats?

check: 3

How many more? Compare graph rows

Rule: “How many more” and “how many fewer” both mean find the DIFFERENCE: subtract the smaller count from the bigger one. Do not add!

Example: In the pets chart, how many more dogs than cats?

Step 1. “How many more” asks for the gap between the rows, so subtract the two counts.

Step 2. Dogs: 5. Cats: 3. $5 - 3 = 2$.

$\Rightarrow$ there are **2** more dogs

Try it: A chart shows 6 birds and 2 fish. How many more birds than fish?

check: 4

(!) Watch out: “How many MORE” does not mean add the rows together. Line the rows up in your mind and look at the extra part — that extra part is the answer.
