

Skills Summary

Numbers Three Ways

Use this reference while completing your worksheet or when studying.

Skill 1 — Expanded form: stretch the number

Rule: Write what each digit is *worth*, joined by plus signs. Hundreds digit $\times 100$, tens digit $\times 10$, ones digit as itself. A place holding a zero is simply left out.

Example: Write 352 in expanded form.

Step 1. Name what each digit is worth: three hundreds, five tens, two ones.

Step 2. Three hundreds are worth 300, five tens are worth 50, two ones are worth 2. $\Rightarrow$
 $352 = 300 + 50 + 2$

Try it: Write 417 in expanded form.

check: $400 + 10 + 7$

Skill 2 — Word form: say it, then write it

Rule: Say the hundreds first (“four hundred”), then the last two digits together (“sixty-three”). Useful words:

- twenty, thirty, forty, fifty, sixty, seventy, eighty, ninety
- Never write “and” inside a whole number.

Example: Write *five hundred sixteen* in standard form.

Step 1. Turn each spoken part into a place: “five hundred” means 5 hundreds, “sixteen” means 1 ten and 6 ones.

Step 2. Five hundreds, one ten, and six ones put a digit in every place. $\Rightarrow$ **516**

Try it: Write *seven hundred thirty-four* in standard form.

check: $700 + 30 + 4$

Skill 3 — Standard form: pack the parts back up

Rule: Sort the parts by size (hundreds, tens, ones), then write one digit per place. If a place has no part, write **0** there to hold it.

Example: Write $600 + 40 + 8$ in standard form.

Step 1. Match each part to its place: 600 fills the hundreds, 40 fills the tens, 8 fills the ones.

Step 2. Write the digits in place order: six, four, eight. $\Rightarrow$ **648**

Try it: Write $200 + 5$ in standard form.

check: **205**

(!) Watch out: $200 + 5$ is *not* 25. The tens place is empty, so a zero must hold it: 2 hundreds, 0 tens, 5 ones.
