

The Zero That Holds a Place

Directions:

- A zero inside a number holds a place open: 507 has 5 hundreds, *zero* tens, and 7 ones.
- Some problems show work with a mistake in it. Find the mistake, fix it, and be ready to say what went wrong.

1. Write **507** in expanded form.

Answer: _____

2. Write the number in standard form: $600 + 3$

Answer: _____

3. Write the number in standard form: $200 + 9$

Answer: _____

4. **Find and fix.** Nia wrote: $830 = 800 + 3$

(a) Write the *correct* expanded form of 830: _____

(b) Name the error Nia made: _____

5. Find and fix. Owen wrote: $402 = 400 + 20$

- (a) Write the *correct* expanded form of 402: _____
- (b) Explain what went wrong in Owen's thinking:
-

6. Write **640** in expanded form. Careful — this time a *different* place is empty.

Answer: _____

7. Kai says **506** and **56** must be equal because both are made from a 5 and a 6.

- (a) Write the true comparison: 506 _____ 56
- (b) In your work space, say why the zero in 506 matters.

8. Challenge. A number has **5** hundreds, **no** tens, and **3** ones.

- (a) Write the number in standard form: _____
- (b) Write its expanded form: _____
