

Two-Step Measurement Stories

Answer Key

Grade 3

Quick Answers

1. 5 minutes	4. 1 L	7. 1150 g	10. 12
2. 40	5. 15 minutes	8. 6 L	11. 19 kg
3. 10 kg	6. 8	9. 7 minutes	12. 4 L

Curriculum

Level: Grade 3

2.MD – problems 2, 6, 10

3.MD – problems 1, 3, 4, 5, 7, 8, 9, 11, 12

Difficulty 1–5 of 5 across 12 tagged checks.

1. Sam's recipe should take 40 minutes in all. He stirred for 5 minutes and baked for 30 minutes. How many minutes are left for cooling?

Solution: Step 1 — time already used: $5 + 30 = 35$ minutes. Step 2 — take that from the whole recipe time: $40 - 35 = 5$. Cooling gets 5 minutes

2. Rosa buys a pencil for 35 cents and an eraser for 25 cents. She pays with a one-dollar bill (100 cents). How many cents does she get back?

Solution: Step 1 — what the two items cost together: $35 + 25 = 60$ cents. Step 2 — change from the dollar: $100 - 60 = 40$. Rosa gets back 40 cents.

3. Mrs. Diaz buys 12 kg of apples and 8 kg of pears. Her cart can hold 30 kg. How many more kilograms can she add?

Solution: Step 1 — mass already in the cart: $12 + 8 = 20$ kg. Step 2 — room left: $30 - 20 = 10$. She can add 10 kg

4. A soup pot holds 6 L. The chef pours in 2 L of broth and 3 L of water. How many more liters can the pot hold?

Solution: Step 1 — liquid already in the pot: $2 + 3 = 5$ L. Step 2 — space left: $6 - 5 = 1$. The pot can hold 1 L more.

5. Gym class is 45 minutes. The class plays 3 rounds of 10 minutes each. How many minutes are not spent on the game?

Solution: Step 1 — game time as equal groups: $3 \times 10 = 30$ minutes. Step 2 — the rest of class: $45 - 30 = 15$. That leaves 15 minutes

6. Sticker packs cost 4 dollars each. Jon buys 3 packs and pays with a 20-dollar bill. How many dollars does he get back?

Solution: Step 1 — cost of the packs: $3 \times 4 = 12$ dollars. Step 2 — change: $20 - 12 = 8$. Jon gets back 8 dollars.

7. One can of beans is 400 g. Talia buys 2 cans and one 350 g jar of sauce. What is the total mass, in grams?

Solution: Step 1 — mass of the cans: $2 \times 400 = 800$ g. Step 2 — add the jar: $800 + 350 = 1150$. The groceries have a mass of 1150 g

8. A 24 L aquarium is filled using 4 equal buckets. After 3 buckets, how many liters are still needed?

Solution: Step 1 — size of one bucket: $24 \div 4 = 6$ L. Step 2 — three buckets poured means $3 \times 6 = 18$ L are in, so $24 - 18 = 6$ liters remain to pour. Still needed: 6 L

9. Train A's ride takes 48 minutes. Train B takes 29 minutes plus a 12-minute wait. How many minutes longer is Train A than Train B's whole trip?

Solution: Step 1 — Train B's whole trip: $29 + 12 = 41$ minutes. Step 2 — compare: $48 - 41 = 7$. Train A is longer by 7 minutes

10. Kane saves 5 dollars each week for 4 weeks. The game costs 32 dollars. How many more dollars does he need?

Solution: Step 1 — saved so far: $4 \times 5 = 20$ dollars. Step 2 — still missing: $32 - 20 = 12$. Kane needs 12 more dollars.

11. One brick is 3 kg and one board is 7 kg. The wagon carries 4 bricks and one board. What is the total mass of the load?

Solution: Step 1 — mass of the bricks: $4 \times 3 = 12$ kg. Step 2 — add the board: $12 + 7 = 19$. The load has a mass of 19 kg

12. Challenge. Papa makes 18 L of lemonade. He fills 5 jugs of 2 L each, then 4 bottles of 1 L each. How many liters are left over?

Solution: Step 1 — lemonade poured into jugs: $5 \times 2 = 10$ L. Step 2 — poured into bottles: $4 \times 1 = 4$ L, so $10 + 4 = 14$ L are poured in all, and $18 - 14 = 4$ liters remain. Left over: 4 L
