

Rounding to Named Places

Rounding on a number line, by the digit rule, and in real contexts

Directions: Problems 1–2 give you a labeled number line. Every other problem has a blank number line you may label and use if it helps. Write each final answer on its answer blank.

1. The number line shows 362 between 300 and 400.

Which hundred is 362 closer to? Round 362 to the nearest hundred.

Answer: _____

2. The number line runs from 4,230 to 4,240.

Round 4,238 to the nearest ten.

Answer: _____

3. Round 5,671 to the nearest *ten*.

Answer: _____

4. Round 5,671 to the nearest *hundred*.

Answer: _____

5. Round 5,671 to the nearest *thousand*.

Answer: _____

6. A stadium sold 18,437 tickets to a game. A newspaper reports the attendance rounded to the nearest thousand. What attendance, in tickets, does the newspaper print?

Answer: _____

7. Round 49,850 to the nearest *thousand*. Be careful — the answer changes more than one digit.

Answer: _____

- 8.** A charity collected 7,352 dollars at a fun run. For the thank-you poster, the total is rounded to the nearest *hundred* dollars. What amount, in dollars, goes on the poster?

Answer: _____

- 9.** A town's population is 26,489. Round it to each named place:
nearest ten _____ nearest hundred _____ nearest thousand _____

- 10.** Kai and Jo both round 3,952 to the nearest hundred. Kai gets 4,000 and Jo gets 3,900.
Write the correct rounded number: _____
Then explain who is correct and why.
