

Find the Error: Rounding and Place Value

Directions: Some problems on this sheet show another student's work that contains a mistake. Be the detective: find the error, say what went wrong, and fix it. Watch for two famous traps — rounding across a 9, and forgetting the zeros that hold a place.

1. Round 2,963 to the nearest hundred.

Answer: _____

2. Round 39,725 to the nearest thousand.

Answer: _____

3. Leo rounds 4,972 to the nearest hundred and writes 4,900. Explain Leo's mistake, then write the correct answer. _____

4. Mia multiplies 30×40 and writes 120. Explain what Mia forgot, then write the correct product. _____

5. Round 9,984 to the nearest hundred.

Answer: _____

6. Jon writes: $50,000 + 300 + 7 = 5,307$. Explain Jon's error, then write the correct number. _____

7. Circle all of the numbers that round to 700 when rounded to the nearest hundred. Below each number, write what it *does* round to.

748 651 762 685

8. Ava rounds 452 and 448 to the nearest ten and announces: "They round to the same number, so 452 and 448 are equal."

452 rounds to _____ and 448 rounds to _____

Explain what is wrong with Ava's conclusion.
