

Find It and Fix It: Counting Detective

Directions: Be a counting detective!

- Whisper-count each row to yourself, pointing at each number.
- Fill every empty box with the number that belongs there.
- When a count has a mistake in it, find it and fix it.

1. Count forward along the track. One box is empty — write the number that belongs in it.

8	9	10	_____	12	13
---	---	----	-------	----	----

2. Two boxes are empty on this track. Write the missing numbers.

45	46	_____	48	_____	50
----	----	-------	----	-------	----

3. Find and fix. Mia counted out loud:

18, 19, 21, 22

She left one number out. Write the missing number: _____

Then say what Mia should remember when she counts. You can tell a grown-up or write it below.

4. **Find and fix.** Leo counted out loud:

38, 39, 30

One number is wrong. Draw an X on it, and write the number that belongs there: _____

Then tell what went wrong in Leo's count.

5. Three number cards fell on the floor and got mixed up:

54	52	53
----	----	----

Write the numbers in counting order, from least to greatest: _____

6. **Challenge.** This hundred-chart row has two empty boxes — and one number sneaked into the wrong spot!

91	92	_____	94	95	69	97	_____	99	100
----	----	-------	----	----	-----------	----	-------	----	-----

Write the number that should be where **69** is: _____

Then tell why 69 cannot come between 95 and 97.
