

Make Ten Practice

Missing partners to ten, decomposing ten, and making ten to add

Directions:

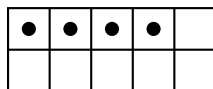

- Ten is a friendly number! Partners like 7 and 3 fit together to make 10.
- After the warm-up, each problem needs its own plan — look before you count.
- Draw dots or use a ten-frame any time it helps.

1. Warm-up. The ten-frame shows 7 dots. How many empty boxes are left to make 10?

$$7 + \underline{\hspace{2cm}} = 10$$

2. Warm-up. The ten-frame shows 4 dots. How many more dots would fill it?

$$4 + \underline{\hspace{2cm}} = 10$$

3. Warm-up. Take 6 out of 10. How many are left?

$$10 - 6 = \underline{\hspace{2cm}}$$

4. Make ten first: $9 + 4$ is the same as $9 + 1 + 3$.

$$9 + 4 = \underline{\hspace{2cm}}$$

5. Think of a ten-frame with 2 dots in it. How many boxes are empty?

$$2 + \underline{\hspace{2cm}} = 10$$

6. Think: 7 and how many more make 10?

$$10 - 7 = \underline{\hspace{2cm}}$$

7. Make ten: fill 8 up to 10, then add what is left over.

$$8 + 6 = \underline{\hspace{2cm}}$$

8. Zoe has 10 berries. She puts 5 of them on her plate. The rest stay in the bowl. How many berries are in the bowl?

$$10 - 5 = \underline{\hspace{2cm}}$$

9. Pick your plan, then add.

$$7 + 5 = \underline{\hspace{2cm}}$$

10. Challenge! Mo adds three numbers: $6+4+2$. First find the partner: $6 + \underline{\hspace{2cm}} = 10$. Then add all three: $6 + 4 + 2 = \underline{\hspace{2cm}}$. Tell how making ten helped you add.
