

Count-On Detectives

Directions:

- To count on, say the start number, then count your hops: for $5 + 2$, say “5” — then hop “6, 7”.
- Some kids on this page counted the start number as a hop. That lands one short!
- Be a detective: find each mistake, fix the sum, and tell what went wrong.

1. Warm-up. Count on the right way: for $6 + 2$, say “6”, then hop two times. What do you land on?

$$6 + 2 = \underline{\hspace{2cm}}$$

2. Jen added $5 + 3$. She counted: “5, 6, 7” — and wrote $5 + 3 = 7$. Write the correct sum, and tell why Jen’s count went wrong.

$$5 + 3 = \underline{\hspace{2cm}}$$

3. Kim added $6 + 3$. She counted: “6, 7, 8” — and wrote $6 + 3 = 8$. Find Kim’s mistake. Write the correct sum, and show the count she should have said.

$$6 + 3 = \underline{\hspace{2cm}}$$

4. Raj added $8 + 2$. He counted: “8, 9” — and wrote $8 + 2 = 9$. Cross out the wrong sum, write the correct one, and tell how Raj should count.

$$8 + 2 = \underline{\hspace{2cm}}$$

5. Ava says $4 + 5 = 8$. Check her sum by counting on from 5. Is Ava right? Write yes or no, then write the correct sum.

$$4 + 5 = \underline{\hspace{2cm}}$$

6. Challenge! Leo says: “I never make the count-on mistake, because I say the start number first, and then I count my hops on my fingers.” Add $3 + 6$ Leo’s way, starting from the bigger number. Then tell how saying the start number first stops the mistake.

$$3 + 6 = \underline{\hspace{2cm}}$$
