

Take Away and Write It

Directions:

- Taking away means crossing out. Each crossed-out object is one taken away.
- Every take-away picture matches a subtraction equation: start – taken away = left.
- Count the objects that are *not* crossed out to find what is left.

1. The picture shows 6 apples. 2 are crossed out. How many apples are left?

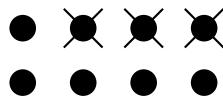

$$6 - 2 = \underline{\hspace{2cm}}$$

2. Your turn to make the picture! Draw 7 circles. Cross out 3 of them. How many circles are left?

$$7 - 3 = \underline{\hspace{2cm}}$$

3. There are 8 counters. 3 are crossed out. Write the story numbers in the equation, then write how many are left.

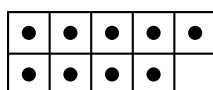

$$\underline{\hspace{2cm}} - \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

4. 5 birds sit on a fence. 2 birds fly away. Write the story numbers in the equation, then write how many birds are still on the fence.

$$\underline{\hspace{2cm}} - \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

5. The ten-frame shows 9 dots. Cross out 4 dots. How many dots are *not* crossed out?

$$9 - 4 = \underline{\hspace{2cm}}$$

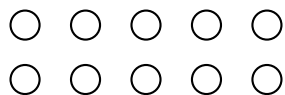

6. Think: 6 and how many more make 10?

$$10 - 6 = \underline{\hspace{2cm}}$$

7. Rosa has 9 grapes. She eats 3 of them. Write the story numbers in the equation, then write how many grapes are left.

$$\underline{\hspace{2cm}} - \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

8. Challenge! The picture shows 10 balloons. Some popped, and now 7 balloons are left. Cross out balloons to show the ones that popped. How many balloons popped?

$$10 - \underline{\hspace{2cm}} = 7$$
