

Teen Numbers: Tens and Ones Fix-It

Answer Key

Grade 1

Quick Answers

- | | |
|--------------------------|-----------------------|
| 1. 14 | 4. 19 |
| 2. tens = 1, ones = 7 | 5. > |
| 3. tens = 1, ones = 3, — | 6. the number = 16, — |
-

What is verified

4 of 6 problems fully machine-checked against SymPy.

— marks an answer only you can judge — problems 3, 6. The worked solution states what a correct response must contain.

Curriculum

Level: Grade 1

1.NBT – *problems 1, 2, 3, 4, 5, 6*

Difficulty 1–4 of 5 across 10 tagged checks.

Common wrong answers

- 3. *If they got 3: swapped the digits and used the ones digit as the number of tens*
 - 3. *If they got 1: swapped the digits and used the tens digit as the number of ones*
 - 4. *If they got 91: wrote the digits in the order the words were said (ones first)*
 - 6. *If they got 61: put the ones digit in the tens place*
-

1. 1 ten and 4 ones make the number —.

Solution: 1 ten is worth 10. Start at 10 and count on the 4 ones: 10, 11, 12, 13, 14. So 1 ten and 4 ones make

14

2. The number 17 has __ ten and __ ones.

Solution: Read 17 place by place. The left digit counts tens and the right digit counts ones. 17 is 10 and 7 more, so it has

ten and it has

ones.

1

7

3. Ben used 3 tens and 1 one to show the number 13. Fix it, then tell how you know.

Solution: Ben swapped the places. In 13 the left digit is the tens digit and the right digit is the ones digit. So 13 has

ten and it has

ones.

1

3

Tell how you know (instructor judges): accept any wording that names the swap — for example, “Ben switched the tens and the ones. The 1 in 13 means 1 ten, and the 3 means 3 ones. What Ben built shows a much bigger number.”

4. Write the number that has 9 ones and 1 ten.

Solution: Careful — the ones were said first! The tens digit still goes first when we write the number: 1 ten and 9 ones is 10 and 9 more. The number is

19

5. Write $>$, $<$, or $=$: 91 __ 19.

Solution: Compare the tens first. 91 has 9 tens; 19 has only 1 ten. 9 tens is more than 1 ten, so

$91 > 19$

6. Mia has 1 ten and 6 ones. She writes 61. Find her mistake and fix it, then tell how you know.

Solution: Mia put the 6 ones in the tens place. 1 ten and 6 ones is 10 and 6 more, so the number is really

16

Tell how you know (instructor judges): accept any wording that names the swapped places — for example, “61 would mean 6 tens and 1 one. Mia only has 1 ten, so the 1 must come first.”
