

Comparing Three-Digit Numbers

comparing with symbols, ordering, and real-world comparisons

Directions:

- Compare place by place: hundreds first, then tens, then ones.
- $>$ means *greater than*, $<$ means *less than*, $=$ means *equal*.

1. Write $<$, $>$, or $=$.

372 327

2. Write $<$, $>$, or $=$.

458 485

3. Both sides are written in expanded form. Write $<$, $>$, or $=$.

$300 + 40 + 2$ $300 + 20 + 4$

4. Maya read **246** pages this year. Leo read **264** pages.

Compare the page counts: 246 264

Who read more pages? _____

5. Write these numbers in order from *least* to *greatest*.

512 251 521

_____ , _____ , _____

6. Green Hill is **730** m tall. Stone Hill is **703** m tall. Compare their heights in meters. Write $<$, $>$, or $=$.

730 m _____ 703 m

7. Use the digits **2**, **5**, and **8** exactly once each to make the *greatest* possible three-digit number.

Answer: _____

8. Three classrooms collected cans for recycling. Room A collected **318** cans, Room B collected **381** cans, and Room C collected **313** cans. Write the three can counts in order from *least* to *greatest*.

_____ , _____ , _____

9. Sam says **476** is greater than **512** because 7 tens beat 1 ten. Write the true comparison with $<$, $>$, or $=$, then explain in your work space why Sam's tens-first thinking goes wrong.

476 _____ 512

10. Challenge. Write these numbers in order from *least* to *greatest*. Watch the places — the same digits appear in different spots!

907 790 970 709

_____, _____, _____, _____
