

Division: Finding the Unknown Factor

missing-factor equations, division facts, and equal-group applications

Directions

- Every division question hides a multiplication fact: $18 \div 3$ asks “ $3 \times ? = 18$.”
- Use a related multiplication fact you know to find each unknown factor.
- In the story problems, the givens are stated first and the question names the unit your answer needs.

1. Find the missing factor: $5 \times n = 20$, $n =$ _____

2. $18 \div 3 =$ _____ Think: $3 \times ? = 18$.

3. Nadia has 24 stickers. She puts them equally onto 4 pages of her album. How many stickers go on each page? Think: $4 \times ? = 24$.

Answer: _____ stickers

4. Find the missing factor: $n \times 7 = 42$, $n =$ _____

5. $35 \div 5 = \underline{\hspace{2cm}}$ Think: $5 \times ? = 35$.

6. An art teacher has 30 markers. She packs 6 markers into each box. How many boxes does she fill? Think: $6 \times ? = 30$.

Answer: boxes

7. Find the missing factor: $9 \times n = 54$, $n = \underline{\hspace{2cm}}$

8. $48 \div 6 = \underline{\hspace{2cm}}$ Think: $6 \times ? = 48$.

9. Ms. Ortiz sets up 40 chairs for a concert. She puts 8 chairs in each row.

(a) Write a multiplication fact with a missing factor that matches this story.

Answer:

(b) How many rows does she make?

Answer: rows

10. Challenge. There are 63 apples packed equally into 7 bags. Explain how the fact $7 \times 9 = 63$ helps you find how many apples are in each bag.

Answer: _____ apples
