

Division Three Ways

matching division stories, drawings, and equations

Directions

- The same division idea can appear as a **story**, as a **drawing** of equal groups, or as an **equation**.
- In each problem, write the division equation that matches what you are given, then solve it.
- Write equations with the division sign, like $10 \div 2 = 5$.

- 1.** Two friends share 10 pretzels equally.

Division equation:

Answer: _____

Pretzels for each friend: _____

- 2.** A florist has 18 flowers and puts 6 flowers in each vase.

Division equation:

Answer: _____

Vases filled: _____

- 3.** Sam sorts 16 socks into pairs (2 socks in each pair).

Division equation:

Answer: _____

Pairs made: _____

4. This drawing shows 15 dots in 3 equal groups.

Write the division equation the drawing shows, then tell how many dots are in each group.

Division equation:

Answer: _____

Dots in each group: _____

5. Write a division story for $12 \div 4$. Then solve it.

$$12 \div 4 = \underline{\hspace{2cm}}$$

6. This drawing shows 24 dots in 4 equal groups.

Write the division equation the drawing shows, then tell how many dots are in each group.

Division equation:

Answer: _____

Dots in each group: _____

7. A library cart holds 27 books shared equally on 3 shelves.

Division equation:

Answer: _____

Books on each shelf: _____

8. Write a division story for $30 \div 6$. Then solve it.

$$30 \div 6 = \underline{\hspace{2cm}}$$

9. This drawing shows 20 dots circled in groups of 5.

(•••••) (•••••) (•••••) (•••••)

Write the division equation the drawing shows, then tell how many groups there are.

Division equation:

Answer:

Groups:

10. A clown ties 40 balloons into bunches of 8.

Division equation:

Answer:

Bunches made:

11. Write a division story for $36 \div 4$. Then solve it.

$$36 \div 4 = \underline{\hspace{2cm}}$$

12. Challenge. Read the story and look at the drawing.

Story: Maya shares 24 berries equally among 4 bowls.

(a) Circle the one equation that matches **both** the story and the drawing:

$24 \div 4$

$4 \div 24$

$24 - 4$

(b) How many berries go in each bowl?

Answer: _____
