

Skills Summary

Anchor Facts: Twos, Fives, and Tens

Use this reference while completing your worksheet or when studying.

Skill 1 — Twos and doubling

Rule: A twos fact is a double: $2 \times n = n + n$.

Doubling a twos fact gives a fours fact: double $2 \times n$ to get $4 \times n$.

Example: Find 4×7 by doubling.

Step 1. Four groups is two groups doubled, so start from the twos anchor and double it.

Step 2. $2 \times 7 = 14$, and doubling gives $14 + 14 = 28$.

$\Rightarrow$ 28

Try it: Find 4×9 by doubling 2×9 .

check: 36

Skill 2 — Fives and skip counting

Rule: Every fives fact lands on a skip-count number ending in 5 or 0.

For a six-of-something fact, take the fives fact and add *one more group*.

Example: Find 5×7 , then use it for 6×7 .

Step 1. Skip count by fives seven times for the anchor, then one more 7 gives the sixth group.

Step 2. $5 \times 7 = 35$, so $6 \times 7 = 35 + 7 = 42$.

$\Rightarrow$ 35 and 42

Try it: Find 5×9 , then 6×9 .

check: 45 and 54

Skill 3 — Tens, plus or minus a group

Rule: $10 \times n$ is n with a zero after it.

A nines fact is one group less than the tens fact: $10 \times n$ minus one n .

Example: Find 9×6 using the tens anchor.

Step 1. Nine groups is one group of 6 fewer than ten groups, so start from 10×6 and subtract one 6.

Step 2. $10 \times 6 = 60$, and $60 - 6 = 54$.

$\Rightarrow$ 54

Try it: Find 9×4 using 10×4 .

check: 36

(!) Watch out: When you add or take away a group, the group is the *other* number, not the anchor. For 9×6 , take away one 6 (not one 9, and not 1).
