

Mass and Liquid Volume: One-Step Problems

Adding, subtracting, multiplying, and sharing masses and liquid volumes

Directions:

- Grams (g) and kilograms (kg) measure *mass*. Milliliters (mL) and liters (L) measure *liquid volume*.
- Decide first: put together, take away, equal groups, or equal shares?
- Show your work, and write the unit with every answer.

1. A pear has a mass of 154 g. An apple has a mass of 138 g. What is the total mass of the two fruits together?

Answer: _____ g

2. A bottle holds 500 mL of juice. Amir pours out 175 mL to fill a cup. How many milliliters of juice are left in the bottle?

Answer: _____ mL

3. One brick has a mass of 2 kg. What is the mass of a stack of 9 bricks?

Answer: _____ kg

4. A cooler holds 24 L of lemonade. It is poured equally into 4 jugs. How many liters of lemonade go into each jug?

Answer: _____ L

5. A bag of rice has a mass of 750 g. A bag of beans has a mass of 425 g. How much more mass does the bag of rice have than the bag of beans?

Answer: _____ g

6. A fish tank holds 38 L of water. Keiko adds 17 L more. How many liters of water are in the tank now?

Answer: _____ L

7. One spoonful of cough medicine is 5 mL. Dev takes 7 spoonfuls during the whole week. How many milliliters of medicine is that in all?

Answer: _____ mL

8. A farmer divides 56 kg of potatoes equally into 8 sacks. How many kilograms of potatoes go into each sack?

Answer: _____ kg

9. The pan balance below is level. The left pan holds a bag of flour. The right pan holds a 400 g weight and a 250 g weight together. What is the mass of the bag of flour?

Answer: _____ g

10. A measuring jug holds 900 mL of water. Lena pours all of the water equally into 3 glasses. How many milliliters of water go into each glass?

Answer: _____ mL
