

Mixed Decimal Review — Estimate It, Then Nail It

Estimating, adding and subtracting, multiplying, and dividing decimals

Directions:

- The problems are mixed on purpose — decide *which* operation each one needs before you start computing.
- For estimates, round each number to the nearest whole number first.
- Show your work in the space under each problem.

1. *Estimate* by rounding each factor to the nearest whole number: $6.1 \times 4.8 \approx$

Answer: _____

2. *Estimate* by rounding each number to the nearest whole number: $19.6 \div 4.1 \approx$

Answer: _____

3. Add: $3.75 + 2.4$

Answer: _____

4. Subtract: $8 - 2.35$

Answer: _____

5. Multiply: 0.7×0.3

Answer: _____

6. Divide: $9.6 \div 0.8$

Answer: _____

7. A pack of markers costs 3.15 dollars. Ms. Okafor buys 4 packs for her class.

(a) *Estimate* the total cost by rounding the price to the nearest whole dollar.

Answer: _____

(b) Find the *exact* total cost in dollars.

Answer: _____

8. Dev buys a sandwich for 2.35 dollars and juice for 3.4 dollars, paying with a 10-dollar bill. How many dollars of change does he get?

Answer: _____

9. A 5.4-meter plank is sawed into shelves that are each 0.9 meter long. How many shelves does that make?

Answer: _____

10. Strawberries cost 2.4 dollars per kilogram. How many dollars do 1.5 kilograms cost?

Answer: _____

11. Ella estimates 3.2×4.1 by computing $3 \times 4 = 12$.

- (a) Without working out the exact product, write $<$ or $>$: $3.2 \times 4.1 \square 12$

Answer: _____

- (b) Explain how you can be sure, using the way Ella rounded.

Answer: _____

12. Challenge. Apples cost 2.1 dollars per kilogram. Rosa bags 3.9 kilograms and pays with a 10-dollar bill.

- (a) *Estimate* the cost by rounding both numbers to the nearest whole number.

Answer: _____

- (b) Find the *exact* cost in dollars.

Answer: _____

- (c) How many dollars of change does Rosa get? Check that your answer fits your estimate.

Answer: _____
