

Building Equivalent Ratio Tables

Building equivalent ratio tables: scaling up, unit-rate columns, and missing values

Directions:

- Every row (or column) of a ratio table shows the **same** ratio. To build a new column, multiply or divide **both** quantities by the same number.
- Worked pattern to follow: if the ratio is 2 pencils for 6 crayons, then multiplying both by 3 gives the new column 6 pencils for 18 crayons.
- Show the multiplier you used in the work space under each table.

1. A bread recipe uses 2 cups of flour for every 3 cups of milk. Complete the table.

cups of flour	2	4	6	8
cups of milk	3	_____	_____	_____

2. A toy set has 4 wheels for every 1 car. Complete the table.

cars	1	2	3	5
wheels	4	_____	_____	_____

3. Notebooks cost 6 dollars for a pack of 3. Complete the table by finding the cost of **one** notebook first.

notebooks	3	one	5
cost in dollars	6	_____	_____

4. A farm stand sells 4 baskets holding 10 melons altogether, always in the same ratio. Complete the table. Hint: for the first column you will need to **divide** both quantities.

baskets	2	4	8	12
melons	_____	10	_____	_____

5. Find the missing value that keeps the two ratios equivalent:

$$\frac{3}{7} = \frac{?}{28}$$

Answer: _____

6. Movie tickets cost 36 dollars for a group of 4 people. Complete the table by finding the cost for **one** person first.

tickets	4	one	6
cost in dollars	36	_____	_____

7. A paint mix uses 6 parts red for every 8 parts white. Complete the table. Hint: the multiplier is not a whole number.

parts red	6	9	15
parts white	8	_____	_____

8. Find the missing value that keeps the two ratios equivalent:

$$\frac{9}{12} = \frac{15}{?}$$

Answer: _____

9. A rice recipe uses 10 cups of water for every 4 cups of rice. Complete the table by finding the water for **one** cup of rice first. Decimal answers are fine.

cups of rice	4	one	7
cups of water	10	_____	_____

- 10.** Both rows of this table must show the ratio 12 to 8. Fill in the two missing values.

first quantity	second quantity
12	8
_____	10
18	_____

- 11.** Machine A prints 180 pages in 4 minutes. Machine B prints 250 pages in 5 minutes. Build a one-minute column for each machine, then decide which machine is faster.

- (a) Machine A, pages in one minute: _____
- (b) Machine B, pages in one minute: _____
- (c) The faster machine is _____

12. A punch recipe uses 3 cups of juice for every 5 cups of soda. Complete the table, then use it to answer the last question.

cups of juice	3	6	9
cups of soda	5	_____	_____

A full batch of punch is juice plus soda. How many cups of **juice** do you need to make 24 cups of punch in total? _____
