

Unit Rates with Whole Numbers

Finding unit rates: divide down to one unit, use the rate, and compare rates

Directions:

- A **unit rate** tells how much for **one**: one hour, one pound, one ticket. In notation:
rate = total $\div$ number of units.
- Each model (equal groups, tables) shows the same idea — connect the model to the division you write.

1. A carton of 12 eggs is used to make 4 pancake batches, each batch using the same number of eggs. Sort the eggs into the groups below, then write the unit rate: eggs per batch.

Answer: _____

2. The table shows a reader finishing 60 pages in 3 hours at a steady pace. Complete the reasoning: how many pages in **one** hour?

hours	3	one
pages	60	?

Answer: _____

3. One movie ticket costs 8 dollars. Use the unit rate to find the cost of 7 tickets, in dollars.

tickets	one	7
cost in dollars	8	?

Answer: _____

4. A stack of 6 comic books costs 18 dollars. What is the unit price, in dollars per book?

Answer: _____

5. A train travels 150 miles in 3 hours at a steady speed. Find its speed as a unit rate.

Answer: _____ mph

6. A print shop makes 24 posters every 2 hours. Complete the rate table.

hours	2	1	5
posters	24	_____	_____

7. A 28-ounce jar of salsa fills 4 serving bowls equally. How many ounces is one serving?

Answer: _____ oz

8. Offer A is 3 pens for 12 dollars. Offer B is 5 pens for 15 dollars.

- (a) Offer A, dollars per pen: _____
- (b) Offer B, dollars per pen: _____
- (c) The better deal per pen is _____

9. Car A drives 240 miles on 8 gallons of gas. Car B drives 210 miles on 6 gallons.

- (a) Car A, miles per gallon: _____
- (b) Car B, miles per gallon: _____
- (c) Which car goes farther on one gallon? _____

10. A 6-pack of juice cans costs 12 dollars. A 10-pack costs 20 dollars.

(a) 6-pack, dollars per can: _____

(b) 10-pack, dollars per can: _____

(c) Write $<$, $>$, or $=$ to compare the two unit prices: _____

(d) In the work space, explain what your comparison tells a shopper choosing between the packs.
