

Teen Numbers — Fixing Swapped Tens and Ones

Every teen number is **1 ten** and some **ones**. The **tens** digit is always written **first**. Some children below flipped their two digits. Read the blocks or the words, then write the number that is really being shown.

- A full ten-frame is one ten. Loose dots are ones.
- Build it with blocks or draw it before you write.
- Check: does the first digit match how many full tens you see?

- 1.** Count the dots. One ten-frame is full, so that is **1 ten**. The loose dots are the **ones**.

There is **1 ten** and there are **5 ones**. Write the number.

Answer: _____

- 2.** Mia builds **1 ten-stick** and **3 ones**. Mia writes **31**.

Mia put her digits in the wrong places. Circle the digit that is in the wrong place, then write the number Mia's blocks really show.

Answer: _____

- 3.** Ben is writing the number **seventeen**. Seventeen is **1 ten** and **7 ones**. Ben writes **71**. Tell why **71** is too big, then write seventeen the correct way.

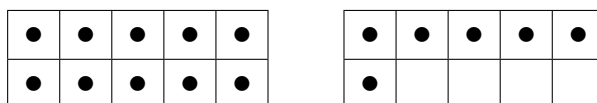

Answer: _____

4. Sam builds **1 ten** and **2 ones**. Ty builds **2 tens** and **1 one**.

Draw both. Then write $<$ or $>$ in the blank:

Sam's number _____ Ty's number

5. Ana counts these dots and writes **61**.

Ana counted **1 ten** and **6 ones**. Find Ana's mistake, then write the number the dots really show.

Answer: _____

6. Jo means to write **1 ten** and **8 ones**. Instead she swaps her two digits.

Write $>$ or $<$ in the blank, then say which digit sits in the tens place of Jo's swapped number:

Jo's swapped number _____ the number Jo meant
