

Standard, Word, and Expanded Form to 1,000

Standard form, expanded form, number names, and comparing numbers written in different forms. Use these three ways of writing the same number:

- **Standard form** — the digits: 546
- **Word form** — the number name: five hundred forty-six
- **Expanded form** — the value of each digit added up: $500 + 40 + 6$

Say the number out loud first. A digit's value depends on its place, so the 5 in 546 is worth 500, not 5. When a place has a zero, that place adds nothing — leave it out of the expanded form.

1. Write 546 in expanded form.

Answer: _____

2. Write $300 + 70 + 2$ in standard form.

Answer: _____

3. Write two hundred eighty-four in standard form.

Answer: _____

4. Write 907 in expanded form. Watch the tens place carefully.

Answer: _____

5. Write $600 + 5$ in standard form.

Answer: _____

6. Which number is greater, $400 + 30 + 9$ or four hundred ninety-three? Write the two numbers in standard form, then write them with the correct symbol ($<$ or $>$) between them.

Answer: _____

7. Maya was asked to write six hundred fifteen in standard form. She wrote 6015. Explain what Maya did wrong, then write the correct standard form.

Answer: _____

8. Put these three numbers in order from least to greatest. Write each one in standard form first: $700 + 8$, seven hundred eighty, and 78.

Answer: _____

9. Write 470 two ways. First write its number name on the line below, then write its expanded form in the work space.

Word form: _____

Answer: _____

10. Challenge. Start with $300+60+5$. Add ten more. Write the new number in standard form, and then write the new number in expanded form.

Answer: _____
