

One-Step Mass and Liquid Volume Problems

One-step problems with mass in grams, liquid volume in millilitres, and measurements read from a record table

How to work each problem.

- Write down the two numbers you are given, *with their units* (g for mass, mL for liquid volume).
- Decide on **one** operation: put together (add), take away (subtract), equal groups (multiply), or share equally (divide).
- Write the answer with its unit. A number with no unit does not answer a measurement question.

1. A bag of rice has a mass of 250 g. A bag of beans has a mass of 300 g. The two bags are put on the same scale.

What is the total mass of the two bags?

Answer: _____ g

2. A pitcher holds 800 mL of water. Ravi pours out 350 mL of the water into a bowl. How much water is still in the pitcher?

Answer: _____ mL

3. Maya keeps a measurement record while she makes juice.

Measurement record	Amount
Juice already in the jug	350 mL
Juice Maya pours in	150 mL

Read both amounts from the record. How much juice is in the jug now?

Answer: _____ mL

4. Every apple in a basket has the same mass, 150 g. There are 4 apples in the basket. What is the mass of all 4 apples together?

Answer: _____ g

5. One measuring cup holds 450 mL of milk. A second measuring cup holds 275 mL of milk. Both cups are emptied into one bowl. How much milk is in the bowl?

Answer: _____ mL

6. A class weighed three fruits and recorded the masses.

Fruit	Mass
melon	900 g
pineapple	650 g
mango	400 g

How much heavier is the melon than the pineapple?

Answer: _____ g

7. A box of books has a mass of 850 g. One book with a mass of 275 g is taken out of the box.

What is the mass of the box now?

Answer: _____ g

8. A pot holds 600 mL of soup. The soup is shared equally into 4 bowls, so every bowl gets the same amount.

How much soup goes into each bowl?

Answer: _____ mL

9. Noah kept this record while emptying a water bottle.

Measurement record	Amount
Water in the bottle at the start	750 mL
Water Noah poured out	300 mL
Noah's answer for what is left	1050 mL

Noah's answer cannot be right. Explain in one sentence what he did wrong, then write the correct amount of water left in the bottle.

Answer: _____ mL

10. A large pot holds 950 mL of soup. Grandma pours the soup equally into 5 cups, so every cup gets the same amount.

How much soup goes into each cup?

Answer: _____ mL
