

Comparing Groups of Objects: More, Fewer, and the Same

How to work each problem:

- Touch each object as you count it. Say the last number you said — that is how many.
 - Match the two groups one to one. Draw a line from one object to one object.
 - If a group runs out first, it has **fewer**. The group with leftovers has **more**.
 - If nothing is left over in either group, the groups are **the same**.
 - The symbol always opens its mouth toward the bigger number: $>$ is “is more than”, $<$ is “is fewer than”, $=$ is “is the same as”.
-

1. Count each row. Circle the row that has **more**.

Amy: ★ ★ ★ ★ ★

Ben: ● ● ●

Amy has **5**. Ben has **3**. Write $>$, $<$, or $=$ in the blank: 5 _____ 3

2. Count each row. Draw a line to match one apple with one basket.

Apples: ● ● ● ●

Baskets: □ □ □ □

Nothing is left over, so the groups are **the same**. Write $>$, $<$, or $=$: 4 _____ 4

3. A pond has **7** frogs. The pond has **4** lily pads.

Frogs: ● ● ● ● ● ● ●

Pads: □ □ □ □

Match one frog to one lily pad. Then cross out every frog that has a pad. **How many more** frogs than lily pads are there? Write the subtraction sentence that shows it.

Answer: _____

4. Count each row. Circle the row that has **fewer**.

Red cubes: ● ● ● ● ● ●

Blue cubes: □ □ □ □ □ □ □ □

There are **6** red cubes and **8** blue cubes. Write $>$, $<$, or $=$: 6 _____ 8

5. **Story.** Nina picks **9** flowers. Omar picks **6** flowers.

Draw Nina's flowers as dots in one row and Omar's flowers as dots in a row right underneath, so each of Omar's dots is under one of Nina's dots.

How many fewer flowers did Omar pick? Write the subtraction sentence that shows it.

Answer: _____

6. Put three groups in order. Three cups hold marbles.

Cup A: ● ● ● ● ● ●

Cup B: ● ● ● ● ● ● ● ● ●

Cup C: ● ● ● ●

Write how many marbles are in each cup. Then write the three numbers in order from **fewest** to **most**.

Answer: _____

7. Make them the same. Sam has **5** shells. Kim has **9** shells.

Draw Sam's shells as dots. Under them, draw Kim's shells as dots, one under each of Sam's. How many **more** shells does Sam need so that both children have the same number?
 $5 + \underline{\hspace{2cm}} = 9$

8. Challenge. Two friends want the same number of stickers. Lee has **4** stickers. Jo has **9** stickers.

Draw the two rows and match them one to one. How many stickers must Lee get so that the two groups are the same? Write the sentence $4 + \underline{\hspace{2cm}} = 9$ with your number in the blank, then explain in one sentence how the picture shows your answer.

Answer: _____
