

Take-From and Comparison Stories Within Ten

Taking objects away, and comparing two groups to see how many more or how many fewer

Two kinds of story, one subtraction.

- **Take from:** you start with a group, some go away, and you count what is left. start – went away = left.
- **Compare:** two groups sit side by side and you match them up. The leftovers tell you how many **more** the big group has, and how many **fewer** the small group has. bigger – smaller = difference.
- Always say the unit out loud with your answer: not just “four”, but “four crayons”.

1. Take from. You have 6 crayons. You give 2 crayons to a friend. Cross out the crayons you gave away.

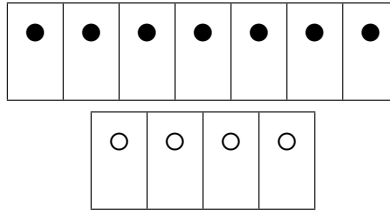

How many crayons are left? $6 - 2 = \underline{\hspace{2cm}}$ crayons

2. Take from. There are 9 stickers on a page. Ana uses 4 stickers. Cross out the stickers Ana uses.

How many stickers are left? $9 - 4 = \underline{\hspace{2cm}}$ stickers

3. Compare. The top row shows **7** red cubes. The bottom row shows **4** blue cubes. Draw a line to match each blue cube with a red cube.

How many **more** red cubes than blue cubes are there? Write the subtraction that answers the question.

Answer: _____

4. Take from. A plate holds **8** grapes. Leo eats **3** of the grapes. Draw the grapes as dots. Cross out the ones Leo eats. Then write the subtraction equation and answer: how many grapes are still on the plate?

Answer: _____

5. Compare. At the pond there are **9** frogs and **5** ducks. Draw a row of frogs and a row of ducks, one under the other, and match them up. How many **fewer** ducks than frogs are there? Write the subtraction equation and the answer.

Answer: _____

6. Take from, missing part. A jar holds **10** buttons. Sam takes some buttons out. Now **6** buttons are in the jar.

How many buttons did Sam take out? $10 - \underline{\hspace{2cm}} = 6$ buttons

7. Compare, missing part. Sam has **9** shells. Sam has **3** more shells than Tia.

How many shells does Tia have? Draw Sam's shells, circle the 3 extra ones, and count what is left.

Answer:

8. Challenge — two steps. A bowl holds **8** apples. The family eats **3** apples. There are also **2** pears in the bowl.

(a) How many apples are left in the bowl?

(b) Now how many **more** apples than pears are in the bowl? Write both subtraction equations.

Answer:
