

Teen Numbers: One Ten and Some Ones

Building a teen number from one ten and some ones, breaking one apart, and comparing two of them

How to use this sheet.

- A **full ten-frame** always holds ten. Fill it first, then count what is left over — those are the **ones**.
- A **ten-stick** is ten cubes joined together. One stick and some loose cubes make a teen number.
- Every teen number is $10 + \text{some ones}$.

1. Count the counters. Then fill in the boxes.

$$10 + \underline{\quad\quad} = \underline{\quad\quad}$$

Answer: _____

2. Count the blocks. One stick is 10. Then fill in the boxes.

$$10 + \underline{\quad\quad} = \underline{\quad\quad}$$

Answer: _____

3. Draw 15 counters. Fill the first frame all the way up before you start the second one.

15 is one ten and _____ ones.

Answer: _____

4. Draw 18 counters the same way. Fill the first frame first.

18 is one ten and _____ ones.

Answer: _____

5. Both piles have one ten-stick, so the loose cubes decide. Count them, then write $<$ or $>$ on the line.

$$10 + 4 \quad \underline{\hspace{1cm}} \quad 10 + 7$$

Answer: _____

- 6.** Mark 16, 12 and 19 on the number line. Then write the three numbers in order, smallest first.

_____ , _____ , _____

Answer: _____

- 7.** The whole is 17. One part is the ten. Fill in the missing part of the number bond, then finish the sentence below it.

$$10 + \underline{\hspace{1cm}} = 17$$

Answer: _____

8. Ella built the left pile. Mo built the right pile. **(a)** Write $<$ or $>$ on the line. **(b)** How many more loose cubes does Ella have than Mo?

$$10 + 9 \quad \underline{\hspace{1cm}} \quad 10 + 5$$

Answer: _____
