

Fact Strategies: Turnarounds and Break-Aparts

Turnaround facts, breaking a factor apart, and finding a missing factor

Directions

- A *turnaround fact* swaps the two factors. The product stays the same.
- *Breaking apart* splits one factor into two friendlier pieces, multiplies each piece, and then puts the two answers together.
- Show the fact you used, not just the answer.

1. Ana already knows that $4 \times 3 = 12$. Use the turnaround fact to find 3×4 .

Answer: _____

2. Ben already knows that $8 \times 2 = 16$. Use the turnaround fact to find 2×8 .

Answer: _____

3. Break apart to multiply. Finish the strategy, then write the product.

$$6 \times 7 = 6 \times (5 + 2) = ?$$

Answer: _____

- 4.** Break apart to multiply. Finish the strategy, then write the product.

$$7 \times 8 = (7 \times 4) + (7 \times 4) = ?$$

Answer: _____

- 5.** Find both products. What do you notice about them?

$$9 \times 5 \quad \text{and} \quad 5 \times 9$$

Answer: _____

- 6.** Use a missing-factor fact to divide. Think: $6 \times \underline{\quad} = 24$.

$$24 \div 6 = ?$$

Answer: _____

- 7.** Nines are easier from tens. Finish the strategy, then write the product.

$$9 \times 6 = (10 \times 6) - (1 \times 6) = ?$$

Answer: _____

- 8.** Break 8×9 apart into two easier facts of your own choosing. Write the two facts you used, then write the product.

Answer: _____

- 9.** Malik says that 7×9 gives the same answer as 7×10 with one group of 7 taken away. Use Malik's strategy to find 7×9 .

Answer: _____

10. There are 35 stickers shared equally among 5 friends. Write the missing-factor fact that matches this story, then find how many stickers each friend gets.

Answer: _____
