

Two-Step Measurement Stories

Two-step stories about time, money, mass, and liquid volume

How to work these problems

- Every problem takes *two* steps. Write both steps, not just the answer.
- Watch the units. If one number is in litres and another is in millilitres, change one of them first: $1 \text{ L} = 1000 \text{ mL}$ and $1 \text{ kg} = 1000 \text{ g}$.
- Write the unit on your answer line: minutes, cents, grams or millilitres.

1. Maya's swim lesson lasts 45 minutes. After the lesson she waits 10 minutes for her ride, and then the ride home takes 20 minutes. How many minutes pass from the start of the lesson until Maya gets home?

Answer: _____ minutes

2. A movie is 95 minutes long. Ben watches 40 minutes of it before dinner and 25 minutes of it after dinner. How many minutes of the movie does he still have left to watch?

Answer: _____ minutes

3. Ella has \$20. She buys a book for \$8.75 and a marker for \$3.50. How much money does Ella have left? Give your answer in dollars.

Answer: _____
