

Picture Graphs and Bar Graphs

Reading a picture graph where one picture stands for four, and a bar graph whose scale counts by twos

For the grown-up helping:

- Every graph on this sheet has a *key* or a *scale*. That is the whole idea: one picture is worth more than one thing, and one grid line is worth more than one thing.
- Before each answer, ask “what is one picture worth?” or “how much is one grid line worth?” Let the child point at the key and say it out loud.
- Skip-counting helps more than multiplying at this age. For a key of four, count 4, 8, 12, 16, 20 along the row with a finger.
- There is space to draw or write under each question. Jottings are welcome.

1. How many books did Ana read?**Books read in March**

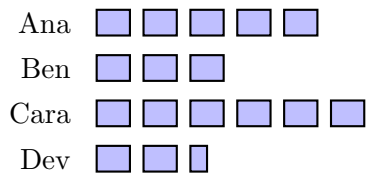

Key: one whole book picture stands for 4 books

Count Ana's pictures first, then skip-count by fours.

Ana's pictures: _____ Books Ana read: _____

2. How many books did Ben read? Use the same graph.

Books read in March

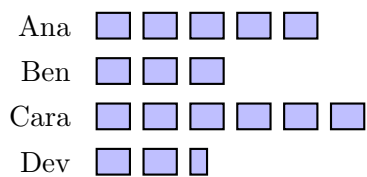

Key: one whole book picture stands for 4 books

Write the skip-count you used: _____

Books Ben read: _____

3. How many more books did Cara read than Ana?

Books read in March

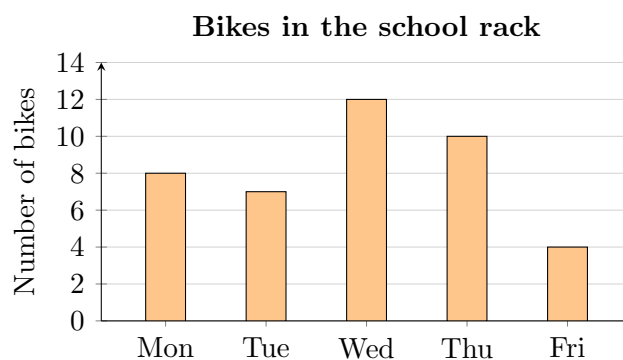

Key: one whole book picture stands for 4 books

Cara read _____ books. Ana read _____ books.

Cara read _____ more books than Ana.

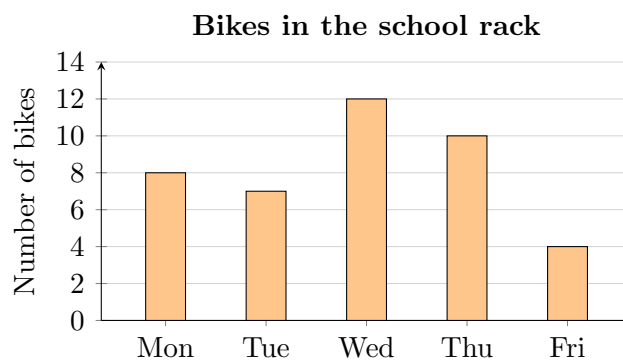

4. How many bikes were in the rack on Wednesday?

The grid lines go up in twos. Put your finger on the top of Wednesday's bar and slide left to the scale.

Bikes on Wednesday: _____

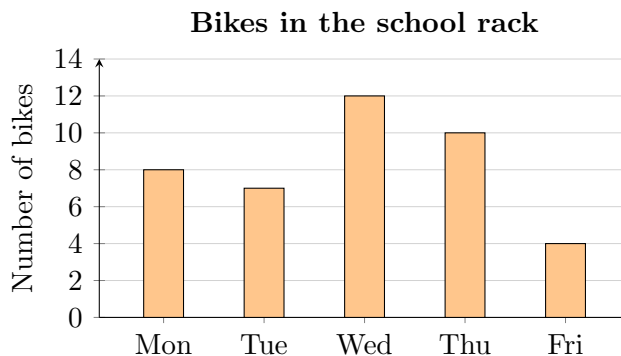

5. How many bikes were in the rack in the whole week? Read every bar, write the five numbers down, then add them.

Mon _____ Tue _____ Wed _____ Thu _____ Fri _____

Bikes altogether: _____

6. Tuesday is tricky. Tuesday's bar does not stop on a grid line — it stops halfway between two of them. How many bikes were in the rack on Tuesday?

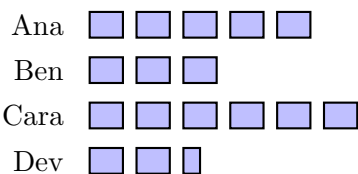

Which two grid-line numbers is the bar between? _____ and _____

Bikes on Tuesday: _____

7. Dev's half picture. Look at Dev's row on the picture graph. There are two whole book pictures and one half picture.

Books read in March

Key: one whole book picture stands for 4 books

A whole picture is worth _____ books, so a half picture is worth _____ books.

Books Dev read: _____

8. **Talk it out.** Jo looks at the picture graph and says:

“Ana read 5 books, because there are 5 pictures in her row.”

Books read in March

Ana 

Key: one whole book picture stands for 4 books

What did Jo forget to look at? Tell your grown-up, then write it here.
