

Numerals, Number Words, and How Many

Counting a picture and writing the numeral, matching a number word to its numeral, and comparing two amounts shown in different ways

Three ways to show the same number.

- The **picture** shows how many things there are. Touch and count each one.
- The **numeral** is the written sign, like 4 or 9.
- The **number word** is what you say, like *four* or *nine*.
- They all name the same amount. A full five-frame is 5 and a full ten-frame is 10, so you can start there and count on.

1. Touch each button and count. Then write the numeral that tells how many.

Answer: _____

2. The card says a number word. The tally marks show the same amount. Count the tally marks and write the numeral that matches the word.

seven ||||| ||

Answer: _____

3. The five-frame is full, so it shows five. Count on for the loose counters. Then circle the number word that tells how many.

four

nine

six

Answer: _____

4. Card A shows a numeral. Card B shows dots. Count card B, then write $>$ or $<$ in the blank so the sentence is true.

Card A:

8

Card B:

★	★	★	★	★
---	---	---	---	---

 ★

Card A _____ Card B

Answer: _____

5. The ten-frame is full, so it shows ten. Count on for the loose dots. Write the numeral that tells how many dots there are altogether.

Answer: _____

6. The word card and the picture show the same amount. Write the numeral that matches them both.

twelve

Answer: _____

7. Sam's card shows a number word. Nina's card shows dots. Find how many each one has, then write $>$ or $<$ in the blank so the sentence is true.

Sam:

eleven

 Nina:

★	★	★	★	★
★	★	★	★	★

 ★ ★ ★ ★

Sam _____ Nina

Answer: _____

8. Ben's word card says *sixteen*. Ben looked at the picture and wrote 6. The ten-frame is full, so it already shows ten. Count again and write the numeral that really matches the picture.

sixteen
