

Sorting Shapes by What Makes Them That Shape

Counting sides and corners, sorting and ordering by those attributes, and telling defining attributes apart from colour and size

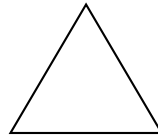

Read this first

- A **side** is a straight edge. A **corner** is where two sides meet.
- Sides and corners tell you what a shape IS. Colour, size, and which way it is turned do NOT.
- Count out loud and touch each side as you count it.

1. Count the straight sides of shape A and shape B. Write the two numbers, then circle the shape that has MORE sides.

A

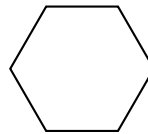

B

Answer: _____

2. Count the corners of shape C and shape D. Write the two numbers, then circle the shape that has FEWER corners.

C

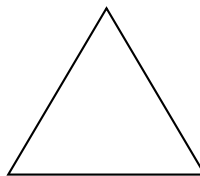

D

Answer: _____

3. Shape E and shape F are both triangles. Count the sides of each and write the two numbers. Milo says, “F is not a triangle, because it is too big.” Is Milo right? Circle YES or NO, then write why.

E

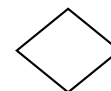

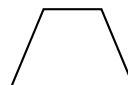

F

YES NO

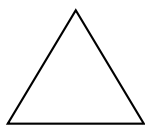

Answer: _____

4. Circle every shape that has exactly FOUR straight sides. Then count: how many did you circle, and how many did you leave? Circle the bigger number.

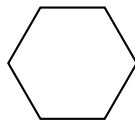

Answer: _____

- 5.** Count the corners of shapes G, H, and I. Then write the three numbers in order, from the FEWEST corners to the MOST corners.

G

H

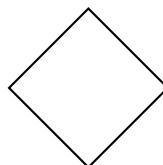

I

Answer: _____

- 6.** Shape L and shape M are the same shape. M has just been turned. Count the sides of each and write the two numbers. A friend says, “M is not a square, because it is standing on its point.” Is the friend right? Circle YES or NO, then write why.

L

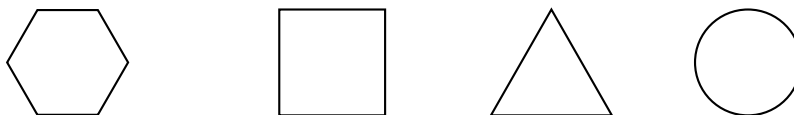

M

YES NO

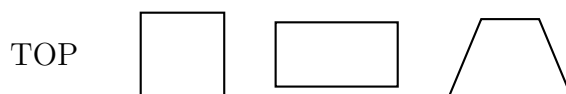

Answer: _____

7. Count the straight sides of each shape below. Then write the four numbers in order, from the MOST sides to the FEWEST sides. (One shape has no straight sides at all.)

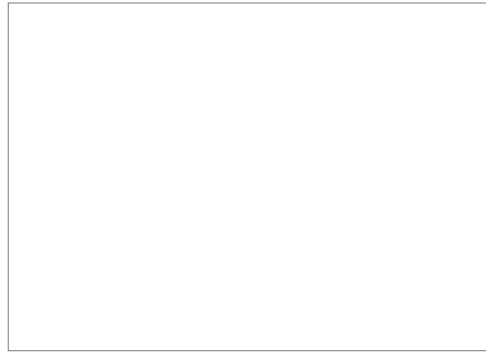

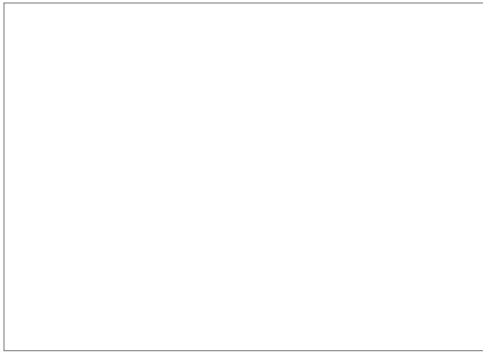

Answer: _____

8. Ana put these shapes into two groups. Look at the top row and the bottom row, then answer: how many sides does every shape in the TOP row have? How many sides does the triangle in the bottom row have? Write the two numbers and circle the bigger one. Then write Ana's sorting rule.

Answer: _____

9. In the box on the left, draw a shape that has four straight sides and four corners but is NOT a square. In the box on the right, draw a shape with exactly three corners.

Answer: _____

10. Sam says, “This shape is a triangle because it is red.” Sam’s rule is not a good rule. Write what is wrong with it, and then write a better rule for telling whether a shape is a triangle.

Answer: _____
