

Add-To Stories Within 10

Answer Key

Kindergarten–Grade 1

Quick Answers

1. 5	3. 9	5. 8	7. 9
2. 7	4. 8	6. 8	8. 9

Curriculum

Level: Kindergarten–Grade 1

K.OA.A / 1.OA.C.6 – *problems 1, 2, 3, 4, 5, 6, 7, 8*

Difficulty 1–4 of 5 across 8 tagged checks.

Common wrong answers

8. *If they got 8: counted the starting number as the first count-on, so the total is 1 too small*

1. 3 counters, then 2 more.

Step 1. The story starts with 3 and 2 more are added, so this is an add-to story: $3 + 2 = ?$

Step 2. Count on from 3: “4, 5.” Two counts, so the frame holds 5 counters in all.

2. Maya: 4 stickers, then 3 more.

Step 1. Start amount 4, change $+3$: $4 + 3 = ?$

Step 2. Count on from 4: “5, 6, 7.” Three counts, so Maya has 7 stickers.

3. 4 birds, then 5 more land.

Step 1. The number sentence is $4 + 5 = ?$ — the two parts are 4 and 5 and the whole is unknown.

Step 2. Start at the bigger part, 5, and count on 4: “6, 7, 8, 9.” So $4 + 5 =$ 9 birds.

4. 6 counters, then 2 more.

Step 1. The frame already shows 6 (a full row of 5 and 1 more), and 2 counters are added: $6 + 2 = ?$

Step 2. Count on from 6: “7, 8.” The frame holds 8 counters in all.

5. 2 fish, then 6 more.

Step 1. $2 + 6 = ?$ Adding in either order gives the same total, so start at the bigger part, 6.

Step 2. Count on 2 from 6: “7, 8.” There are 8 fish in all. (Counting on from 2 gives the same answer but takes six counts.)

6. 5 blocks, then 3 more.

Step 1. Start amount 5, change +3, total unknown, so the number sentence is $5 + 3 = ?$

Step 2. Count on from 5: “6, 7, 8.” The finished sentence is $5 + 3 = \boxed{8}$ blocks.

7. Ana: 3 crayons, then 2 more, then 4 more.

Step 1. Two changes are added to the same start, so one sentence covers the whole story:
 $3 + 2 + 4 = ?$

Step 2. Add the first change: $3 + 2 = 5$. Now count on 4 from 5: “6, 7, 8, 9.” Ana has $\boxed{9}$ crayons.

8. Ben: 4 cars, then 3 more, then 2 more.

Step 1. The sentence for the whole story is $4 + 3 + 2 = ?$

Step 2. $4 + 3 = 7$, then count on 2 from 7: “8, 9.”

Step 3. Ben is **not** right. He said 8 because he started counting at 4 instead of 5, which loses one car. The correct total is $\boxed{9}$ cars.
