

Reading and Comparing Multi-Digit Whole Numbers

Directions: Read each number out loud before you answer. The place-value charts are there to help you line digits up — use them. Show your thinking in the space under each problem, then write your final answer on the answer line.

This sheet practices: Digit values, expanded and word form, comparing and ordering, rounding to estimate.

1. The place-value chart below shows one whole number.

Ten thousands	Thousands	Hundreds	Tens	Ones
4	7	3	8	2

- (a) Write the number in standard form.

Answer: _____

- (b) What is the **value** of the digit 7 in that number? (Not just “7” — what is the 7 worth?)

Answer: _____

2. The number 44,000 is written with two 4s. The 4 on the left is worth 40,000. The 4 beside it is worth 4,000.

How many times as much is the left 4 worth as the 4 next to it?

Answer: _____

- 3.** A number has been broken into the value of each of its digits. Put it back together and write it in standard form.

$$500,000 + 30,000 + 8,000 + 60 + 2$$

Answer: _____

- 4.** Compare the two numbers below. Write $<$ or $>$ in the blank. The chart lines the digits up for you — start at the left and find the first place where they differ.

Ten thousands	Thousands	Hundreds	Tens	Ones
4	6	3	1	5
4	6	3	5	1

46,315 _____ 46,351

Answer: _____

- 5.** Write this number in standard form:
two hundred nine thousand, forty

Answer: _____

6. Order these three numbers from **least to greatest**. Write them on the answer line with $<$ signs between them.

80,912 8,921 80,921

Answer: _____

7. Round 47,382 to the nearest thousand. The table shows the two thousands this number sits between, with the halfway point in the middle.

Thousand below	Halfway point	Thousand above
47,000	47,500	48,000

Answer: _____

8. Mia looks at the number 350,842 and says, “The value of the digit 5 is 500,000.” Mia has the wrong place. Write the **correct** value of the digit 5.

Answer: _____

9. A town library lent 18,472 books in June and 21,650 books in July. Estimate the total number of books lent in the two months by first rounding each number to the nearest thousand, then adding.

Answer: _____

10. Two towns report their populations: Ashford has 34,650 people and Belmont has 34,509 people.

(a) Round Ashford's population to the nearest thousand.

Answer: _____

(b) Rounding hides the difference: both towns round to the same thousand. Which town actually has more people? Write the two populations with $>$ between them.

Answer: _____
