

Taking Away Objects and Writing Subtraction Equations

Kindergarten–Grade 1

How to work each problem:

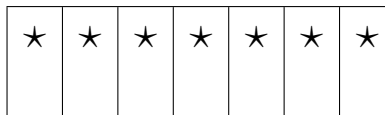

- Put your finger on the picture and count the objects you start with.
 - Draw an **X** on each object that is taken away.
 - Count only the objects with **no** X. That is how many are left.
 - Then write the equation: start – taken away = left.
-

- 1.** You have **5** counters. Cross out **2** of them.

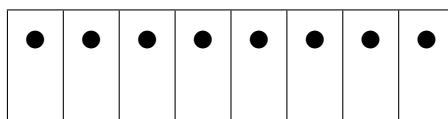

How many counters are left? $5 - 2 =$ _____

- 2.** Here are **7** stars. Cross out **3** of them.

How many stars are left? $7 - 3 =$ _____

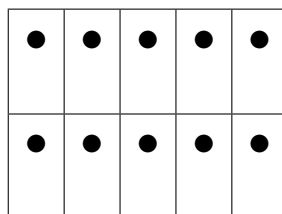

- 3.** A basket holds **8** apples. Ravi takes **5** apples out of the basket. Cross out the apples Ravi takes.

Write the whole subtraction equation for the picture, then answer: how many apples are **still in the basket**?

Answer: _____

- 4.** This ten-frame is full. It shows **10** cubes. Cross out **4** cubes.

How many cubes are left? $10 - 4 = \underline{\hspace{2cm}}$

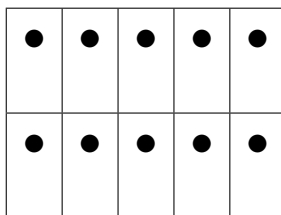

- 5. Story problem.** There are **6** birds sitting on a fence. Then **2** birds fly away. Draw 6 birds as dots. Cross out the ones that fly away. Then write the subtraction equation and the answer.

Answer: _____

6. Mia starts with **9** blocks. She gives some blocks away. Now **4** blocks are left.
How many blocks did Mia give away? $9 - \underline{\hspace{2cm}} = 4$

7. A plate has **10** grapes. Some grapes are eaten. Now **3** grapes are left.
How many grapes were eaten? $10 - \underline{\hspace{2cm}} = 3$

8. Challenge. Ten counters were on the desk. Someone took some away. Now **6** counters are left.

Cross out counters until only 6 are left. How many did you cross out? Write the equation that tells the whole story.

Answer: $\underline{\hspace{2cm}}$
