

Teen Numbers: Numerals and Number Words

Answer Key

Kindergarten–Grade 1

Quick Answers

1. 13	4. 8	7. 16	10. —
2. 17	5. 19	8. 5	
3. 14	6. 2	9. —	

Common wrong answers

8. *If they got 14: read the 1 in 15 as one one instead of one ten, leaving 14 loose*

1. One full ten-frame and 3 extra dots. The filled frame is one ten, so count on from ten: 11, 12, 13. Ten and 3 ones is $10 + 3$, and the numeral is 13.

2. One ten and 7 ones. Start at ten and count on 7: 11, 12, 13, 14, 15, 16, 17. Written as a sum, $10 + 7$, so the numeral is 17.

3. The word *fourteen* is heard as “four-teen”: the *-teen* part means one ten and the *four* part means 4 ones. So the number is $10 + 4$ and the numeral is 14.

4. Number word: **eighteen**. Reading the numeral 18, the 1 stands for one ten and the 8 stands for the ones. Take the ten away from 18 to see the ones: $18 - 10$ leaves 8 ones. So 18 is one ten and 8 ones.

5. One full ten-frame is one ten, and the second frame holds 9 dots. Count on from ten: 11, 12, 13, 14, 15, 16, 17, 18, 19. Ten and 9 ones is $10 + 9$, so the numeral is 19.

6. Number word: **twelve**. Twelve is a name that must be memorised — it does not say “two-teen” — but its place value works the same way. Reading 12, the 1 is one ten, so the ones are what is left after the ten: $12 - 10 =$ 2 ones.

7. The word *sixteen* means six and one ten: $10 + 6$. Counting on from ten confirms it: 11, 12, 13, 14, 15, 16. The numeral is 16.

8. 15 stickers in all. One ten of them are bagged, so subtract that whole ten from the total: $15 - 10 =$ 5 loose stickers. The 1 in 15 is worth ten stickers, not one, which is why 14 is not the answer.

9. Both numbers have one ten, so compare the ones: 13 has 3 ones and 15 has 5 ones. Since 3 ones is fewer than 5 ones, 13 comes first when counting, so the true sentence uses <.

10. Sam's number word *fourteen* is the numeral 14; Mia's *seventeen* is 17. Both have one ten, so compare the ones: 4 ones is fewer than 7 ones. Counting forward we reach 14 before 17, so Sam's number is less than Mia's: $\boxed{<}$.
