

Skills Summary

Add-To Stories Within 10

Use this reference while completing your worksheet or when studying.

1. Turning the story into a number sentence

Rule:

An *add-to* story has three parts: what you **start** with, what is **added**, and how many there are **in all**.

start + added = in all (the “in all” number is the one you are hunting)

Words that mean add: *more, gives you, joins, lands, puts in, altogether, in all*.

Example: 3 ducks are in the pond. 4 more ducks swim in. How many ducks in all?

Step 1. The pond starts with 3 and 4 more join, so the two parts are known and the whole is missing — write start + added.

Step 2. $3 + 4$: count on from 3 — “4, 5, 6, 7” — four counts. $3 + 4 = 7$ ducks in all.

Try it: 5 toy cars are on the rug. 3 more cars are rolled over. How many cars in all?

2. Counting on from the bigger part (count-on-to-add)

Rule:

Put the **bigger** part in your head, then count **one number for each** of the smaller part. Say the next number first — the starting number is already counted.

$6 + 2$: hold 6, say “7, 8” (2 counts) $\Rightarrow 8$

Example: Start with 6 shells. Find 2 more.

Step 1. Both parts are small and one is much bigger, so counting on beats counting everything again.

Step 2. Hold 6, then say two numbers: “7, 8.” Stop after two counts. $6 + 2 = 8$ shells.

Try it: Start with 7 marbles. Find 2 more.

6 :ꞑɹɔ

(!) Watch out: Do *not* say the starting number as your first count. For $6 + 2$ say “7, 8” — saying “6, 7” lands you one too low.

3. Showing the story on a ten-frame (ten-frame-add)

Model:

Fill the top row first, left to right, then the bottom row. A full row is **5**, and a full frame is **10**, so you can see the total without counting every dot.

Example: The frame shows 4 counters. Put on 5 more.

Step 1. The picture already holds the start number, so add the new counters to the frame and read the whole frame.

Step 2. 4 fills most of the top row; 5 more finishes that row (that is 5) and puts 4 in the bottom row: $5 + 4$. $4 + 5 = \mathbf{9}$ counters in all.

Try it: The frame shows 3 counters. Put on 5 more.
