

Finding the Missing Factor

Arrays, known facts, and story problems with one factor missing

Directions:

- Each problem is missing one factor. Find the number that makes the equation true.
- Show how you found it: skip-count, draw equal groups, or write the multiplication fact you used.
- Every total in this worksheet is 100 or less.
- Write your final answer on the answer line.

1. A sticker sheet has 4 equal rows. There are 24 stickers on the sheet.

How many stickers are in each row? $4 \times \underline{\quad} = 24$

Answer: _____

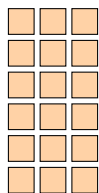

2. A garden has 5 equal rows of seedlings. There are 35 seedlings in the garden.

How many seedlings are in each row? $5 \times \underline{\quad} = 35$

Answer: _____

3. Tiles are laid in equal rows of 3 tiles. Altogether there are 18 tiles.

How many rows of tiles are there? $\underline{\hspace{2cm}} \times 3 = 18$

Answer: $\underline{\hspace{2cm}}$

4. Find the missing factor. $6 \times \underline{\hspace{2cm}} = 42$

Answer: $\underline{\hspace{2cm}}$

5. Find the missing factor. $\underline{\hspace{2cm}} \times 9 = 54$

Answer: $\underline{\hspace{2cm}}$

6. A craft box holds exactly 8 crayons. A classroom has 56 crayons, all packed in full boxes. How many boxes of crayons does the classroom have? $8 \times \underline{\hspace{1cm}} = 56$

Answer: boxes

7. Find the missing factor. $7 \times \underline{\hspace{1cm}} = 63$

Answer:

8. A baking tray holds exactly 5 muffins. A bakery has 45 muffins cooling on full trays. How many trays are in use? $5 \times \underline{\hspace{1cm}} = 45$

Answer: trays

9. Find the missing factor. $\underline{\hspace{1cm}} \times 8 = 72$

Answer:

10. A class sets up 6 equal rows of chairs. There are 48 chairs in all.

- (a) How many chairs are in each row? $6 \times \underline{\hspace{2cm}} = 48$
- (b) Explain how a multiplication fact you already know helps you find that missing number.
