

Reading Graphs Carefully — Find the Mistake, Then Fix It

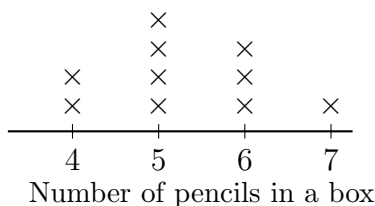

Everyone in these problems has made the same kind of slip. Slow down and check three things before you answer.

- **On a bar graph, read the numbers up the side.** The steps are not always worth one. Find two numbers that are next to each other on the side to see what one step is worth.
- **On a line plot, count the marks.** The number written underneath tells you *what* was counted. The marks tell you *how many*.
- **Name a shape by counting, not by looking.** Count the straight sides. Count the corners. Then decide.

Graph A — Books read this month. Use it for problems 1 to 4.

Graph B — Pencils in each box. One mark $\times$ stands for one box. Use it for problems 5 and 6.

1. **Graph A.** How many books did Ana read?

Answer: _____

2. Find and fix. Graph A. Nia said, “Ben read 3 books, because his bar is 3 steps tall.” Nia forgot to look at the numbers up the side. What is one step really worth, and how many books did Ben read?

Answer: _____

3. Graph A. How many *more* books did Cruz read than Dee?

Answer: _____

4. Find and fix. Graph A. Sam said, “the tallest bar goes up 6 steps, so the most books anyone read is 6.” Sam counted steps instead of reading the side. What is the most books anyone read?

Answer: _____

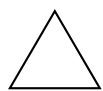

5. Find and fix. Graph B. Rae said, “5 boxes had 5 pencils in them, because the number under the marks is 5.” Rae mixed up the number on the line with the number of marks. How many boxes really had 5 pencils?

Answer: _____

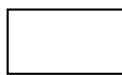

6. Graph B. Which number of pencils happened most often? Careful: the answer is the number written *under* the tallest stack, not how many marks are in it.

Answer: _____

7. Find and fix. Theo counted the straight sides of these four shapes and wrote: A: 3, B: 4, C: 6, D: 5. Two of Theo's counts got swapped. Count for yourself: how many straight sides does shape **C** have?

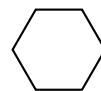

A

B

C

D

Answer: _____

8. Show what you know. Ana said, “any shape with four straight sides is a square.”

(a) In the box below, draw a shape with four straight sides that is *not* a square.

(b) Write one sentence saying what a square has that your shape does not have.
