

Ten-Frames: How Many Do You See?

Telling how many a ten-frame shows, finding how many more make ten, and comparing two ten-frames

How to read a ten-frame.

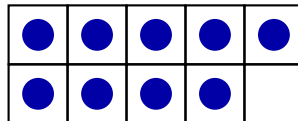

- A ten-frame has two rows of five boxes. A full row is **five**. A full frame is **ten**.
- When the top row is full, you do not have to start at one. Say “five”, then count on for the dots below: six, seven, ...
- Look before you count. Check whether the top row really is full — sometimes it is not.

1. The top row is full. Say “five”, then count on. How many dots does this ten-frame show?

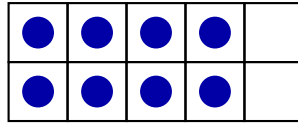

Answer: _____

2. How many dots does this ten-frame show?

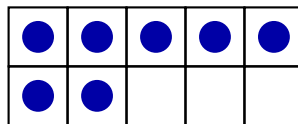

Answer: _____

3. Neither row is full this time. Count the top row, then keep counting the bottom row. How many dots in all?

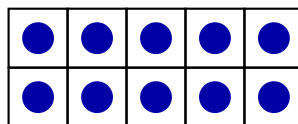

Answer: _____

4. How many boxes are still **empty** in this ten-frame?

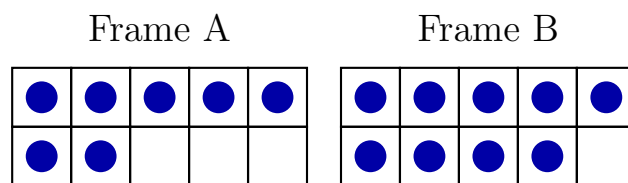

Answer: _____

5. How many dots does this ten-frame show?

Answer: _____

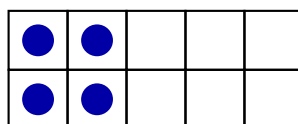

6. Look at both ten-frames. Count each one. Then write $>$ or $<$ in the blank so the sentence is true.

Frame A _____ Frame B

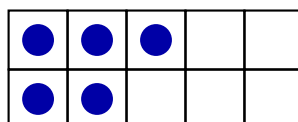

Answer: _____

7. How many more dots are needed to fill this ten-frame?

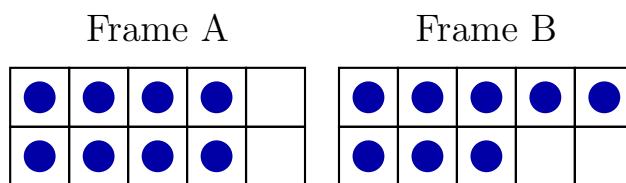

Answer: _____

8. Careful — the top row is not full. How many dots does this ten-frame show?

Answer: _____

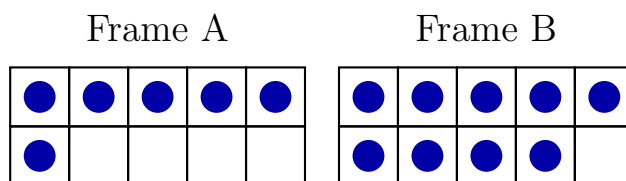

9. Count both ten-frames. Then write $>$, $<$ or $=$ in the blank so the sentence is true.

Frame A _____ Frame B

Answer: _____

10. This time count the **empty** boxes in each frame. Which frame needs more dots to be full? Write $>$ or $<$ in the blank so the sentence is true.

empty boxes in A _____ empty boxes in B

Answer: _____
