

Zeros That Hold a Place

How to work:

- Every number has a **hundreds** place, a **tens** place, and a **ones** place.
- A **0** means there is nothing in that place — but the 0 still holds the place open, so the other digits stay where they belong.
- Use the charts and the space to show your thinking. Then write your answer on the line.

1. Write the number this chart shows.

hundreds	tens	ones
4	0	7

Then finish the expanded form: _____ + _____ + _____

Answer: _____

2. This number is written in expanded form. Write it the usual way.

$$600 + 0 + 5 = \underline{\hspace{2cm}}$$

Answer: _____

3. Write $<$ or $>$ in the box to compare these two numbers.

$$406 \quad \boxed{} \quad 460$$

The digits are the same. Explain on the answer line which place makes the difference.

Answer: _____

4. **Find the mistake.** Jamal writes the expanded form of 308 like this:

$$308 = 300 + 80$$

His pieces add up to 380, not 308.

- (a) Tell what Jamal did wrong with the 0 in the tens place.
- (b) Write the expanded form of 308 correctly, and write the number it makes.

Answer: _____

5. Find the mistake. Ruby writes the expanded form of 720 like this:

$$720 = 700 + 2$$

Her pieces add up to 702, not 720.

- (a) Tell what Ruby did wrong with the 2.
- (b) Write the expanded form of 720 correctly, and write the number it makes.

Answer: _____

6. Nina has base-ten blocks: 3 hundreds, 0 tens, and 9 ones. Her teacher gives her 4 more tens. What number do Nina's blocks show now?

Answer: _____

7. Put these three numbers in order from **least** to **greatest**.

380 830 308

Write them on the lines: _____ , _____ , _____

Answer: _____

8. Challenge. One number has 7 hundreds, 0 tens, and 0 ones. A second number has 0 hundreds, 7 tens, and 0 ones.

(a) Write both numbers.

(b) Both numbers use the digit 7. Write $<$ or $>$ between them, and tell how you know.

Answer: _____
