

Adding Three-Digit Numbers with Regrouping

Adding three-digit numbers with regrouping, estimating a sum by rounding to the nearest hundred, and adding to answer story questions

How to work these problems.

- Stack the two numbers so the ones sit under the ones, the tens under the tens, and the hundreds under the hundreds.
- Add the ones column first, then the tens, then the hundreds.
- If a column adds up to ten or more, write the ones digit under that column and carry the ten into the next column to the left. That carry is the *regrouping*, and it has to be added in with the next column.
- Write your little carry digits above the columns and leave them there. They show your thinking, and they are the first place to look if an answer comes out wrong.

1. Add. $348 + 125$

Answer: _____

2. Add. $265 + 173$

Answer: _____

3. Add. $476 + 258$

Answer: _____

4. First round each number to the nearest hundred and add the rounded numbers to get an estimate. Then add $487 + 356$ exactly and see how close your estimate came.

Estimate: _____ Exact sum: _____

5. Add. $389 + 247$

Answer: _____

6. Add. $596 + 208$

Answer: _____

7. Maya's class collected 268 cans of food in October and 157 cans in November. How many cans did the class collect altogether?

Answer: _____

8. Add. $675 + 349$

Answer: _____

9. First round each number to the nearest hundred and add the rounded numbers to get an estimate. Then add $612 + 289$ exactly. This time the estimate lands surprisingly close to the exact sum.

Estimate: _____ Exact sum: _____

10. Ben added $457 + 276$ and wrote 623. Ben wrote down only the last digit of each column and never carried the extra ten. Add the two numbers correctly, carrying where you need to, and write the sum you get.

Answer: _____
