

Multiplication: Rows, Arrays, and the Total

Directions

- An array has **rows**, and every row holds the **same number** of things.
- The **total** counts everything in the array — multiply the rows by the number in each row.
- Watch out! Some problems show work that mixes up the rows and the total. Your job is to find the mistake and fix it.

1. This array has 3 rows with 5 dots in each row.

How many dots are there in all?

Answer: _____

2. Nadia packs 4 bags for a picnic. She puts 6 apples in each bag. How many apples does she pack in all?

Answer: _____

3. The chairs in the music room are set up in an array: 5 rows with 7 chairs in each row. How many chairs are in the music room in all?

Answer: _____

4. Maya's class made a sticker array with 4 rows and 8 stickers in each row. Maya wrote $4 + 8 = 12$ and says the array has 12 stickers.

(a) What did Maya do wrong?

(b) Find the correct number of stickers.

Answer: _____

5. Leo has 6 boxes of crayons with 3 crayons in each box. He wrote $6 + 3 = 9$ and says he has 9 crayons.

(a) What did Leo do wrong?

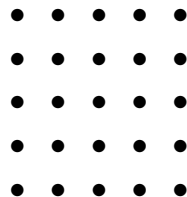

(b) Find the correct number of crayons.

Answer: _____

6. A muffin tray is set out in rows. Each row holds 6 muffins, and there are 24 muffins in all. How many rows are on the tray? You can use the equation $n \times 6 = 24$.

Answer: _____

7. Kai looks at this array of 5 rows with 5 dots in each row.

Kai says: “ $5 + 5 = 10$, so there are 10 dots.”

- (a) Say why Kai’s answer does not count the whole array.

- (b) Find the correct number of dots.

Answer: _____

8. Rosa sets up chairs for a play: 7 rows with 8 chairs in each row. She counts the 7 rows, counts the 8 chairs in one row, and writes $7 + 8 = 15$ chairs.

- (a) Explain what Rosa’s 15 really counted, and why it is not the total.

- (b) How many chairs does Rosa set up in all?

Answer: _____
